

APPTime

Time & Attendance System

because time
means money

APPSolve

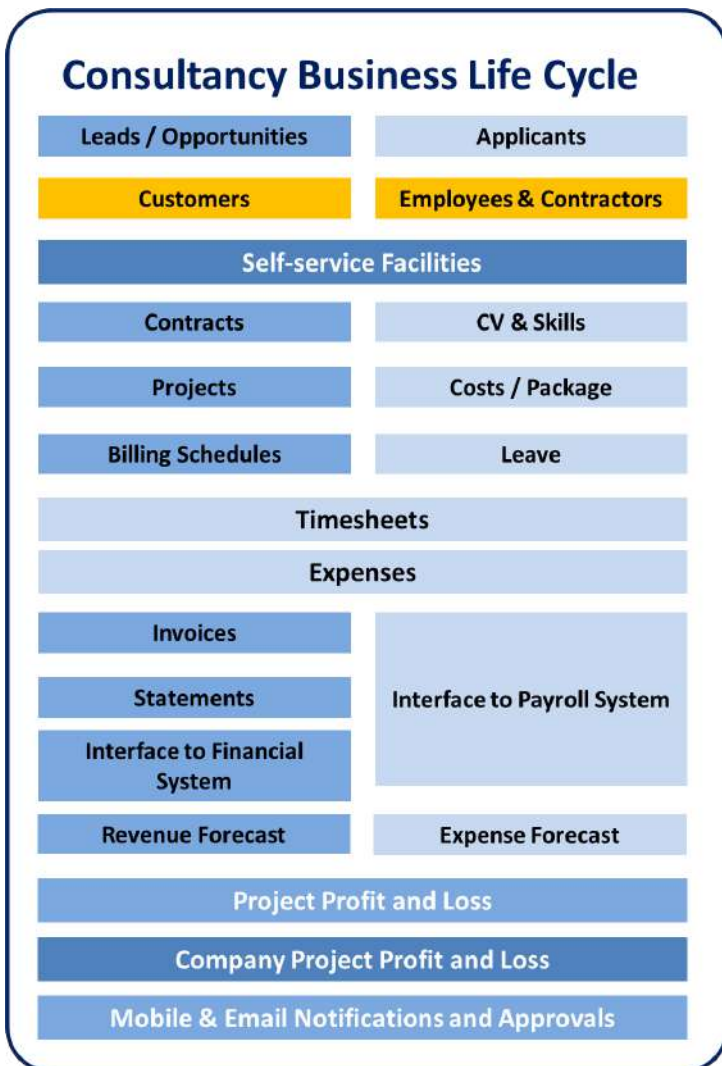

APPTIME

PROJECT, RESOURCE AND TIME MANAGEMENT

1. PRODUCT OVERVIEW

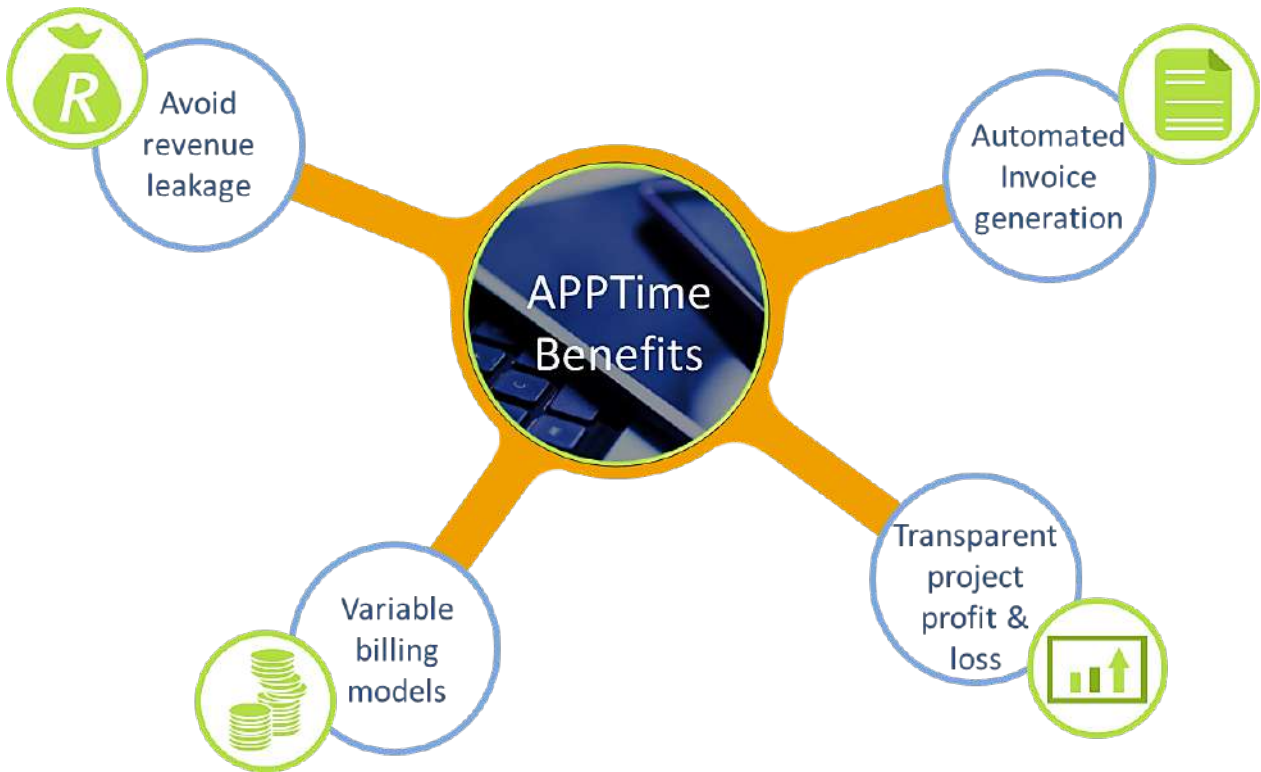

APPTime allows one to manage the entire lifecycle of any consulting firm. What sets it apart is the ability to prevent revenue leakage. APPSolve developed the APPTime system to cater for our internal requirements. It became apparent that our internal requirements were not unique in the South African consulting environment and with a few minor adjustments the system became viable across various industries.

It is integrated, efficient and designed to allow for the time logging process and billing management to be as simple as possible for users. It not only provides a one stop application for customer and resource maintenance, but also enables resources to capture their time sheets, expenses and leave. It further runs interactive query reports and report on projects, billing and time.

We developed APPTime using APEX version 5.1 and it can operate from any internet browser.

2. BENEFITS

3. KEY FEATURES

- Manage suppliers, customers, employees and contractors including employee and contractor cost to company

- Manage internal and external resource CV's and skills matrix

- Manage leads and opportunities

- Manage contracts and projects, including start date, duration and resource allocation
